

AGI Root One Coin — D1–D3 Operational Architecture (Implementation Summary)

Generated: 2026-02-20 19:11 UTC

D1 — Root Constitution (Locked, Non-Economic)

D1 is the off-chain constitutional artifact (“AGI_Root_One_Coin_Laws_v1.pdf”). It defines legitimacy, continuity, and invariants. D1 does not receive, hold, route, or depend on revenue; it contains no governance or operational logic.

Invariant	Meaning
Non-economic Root	No fees, routing, balances, profit rights, or tokenized yield at Root.
Immutability posture	D1 is locked; any change requires explicit Root version transition per Framework v2+.
Authority boundary	All operational authority is delegated below D1 and is replaceable.

D2 — Polygon Anchor (On-chain Existence Only)

D2 creates the sole on-chain instance of the AGI Root One Coin on Polygon mainnet (ERC-721, supply=1). D2 anchors D1 via D1 SHA-256 and metadata only. D2 contains no economics, no governance, and no platform operations.

Item	Value
Canonical contract	0x135B5dB8424b8F14ceFB9d8Ad629E16909B4F145
Token	tokenId=1, supply=1
Mint posture	Mint in constructor to custody address (deploy+mint one step)
No-payable rule	No payable/receive; no routing; no balances

D3 — Delegated Operations and Safety (Design Only; Replaceable)

D3 defines bounded operational power beneath the Root. D3 is delegated, replaceable, and limited to negative powers (pause/quarantine/escalate). D3 cannot amend D1, cannot alter D2, cannot seize Root custody, and cannot introduce economics.

Component	Rule
Topology	Hub-and-spoke: Root anchors legitimacy; governance provides guardrails; execution domain
Negative powers only	Quarantine / suspension / revocation ladder with hard gates; no steering of routine execution
Transparency	All enforcement actions logged with reason code + evidence pointer + expiry/appeal where re
Capture recovery	Governance modules must be replaceable; replacement authority cannot be controlled solely
Commercial firewall	D4 revenue/referral structures must not influence governance authority, Root custody, or enf

Default Timing Defaults (Stress-Test Output)

Action	Default	Hard cap / notes
Quarantine	24h	Max 72h total; then lift or convert to Suspension
Suspension	7d	Max 14d total; then lift or queue Revocation
Emergency pause (public surfaces)	72h	Max 6d total; renewals require higher threshold + review record
Revocation (irreversible)	Queue + 14d timelock	7d appeal; if appealed, extend to 21d + independent review point
Governance module replacement (normal)	7d notice/timelock	Replacement path externalized (module can't lock itself in)
