

AGI ROOT ONE COIN — LAWS & CONSTITUTION (D1)

Version: v1.0

Status: LOCKED CONSTITUTIONAL ARTIFACT

Preamble

This document constitutes the constitutional laws governing the AGI Root One Coin.

It defines the immutable authority, scope, and constraints of the AGI Root and binds all downstream frameworks, governance mechanisms, domains, systems, and economic modules.

1. Identity and Purpose

The AGI Root One Coin is a single, non-economic on-chain artifact whose sole purpose is to anchor

authority, continuity, and legitimacy for the .agi ecosystem.

2. Supply and Nature

Supply: 1

The AGI Root One Coin is not a currency, security, utility token, governance token, or investment instrument.

It conveys no profit rights, ownership claims, or economic entitlements.

3. Authority

The AGI Root One Coin defines the highest level of authority within the .agi ecosystem.

All governance, economic mechanisms, domains, systems, and contracts operate subject to Root constraints.

4. Invariants

The following invariants are locked at the Root level:

- Non-economic nature of the AGI Root One Coin
- Separation of authority from economic instruments
- Existence of a fixed Root-defined brand-level fee
- Builder-first economic constraints defined by the Framework

5. Economics Boundary

The AGI Root One Coin does not receive, hold, route, or manage funds.

It defines economic rules only.

All economic activity occurs beneath the Root according to the AGI Root Framework.

6. Governance Boundary

Governance mechanisms are delegated and bounded.

They may not alter Root invariants, seize Root authority, or convert the Root into an economic instrument.

7. Continuity

The AGI Root One Coin exists to ensure long-term continuity of the .agi ecosystem independent of any single organization, governance body, or market condition.

8. Mutability

This document is locked.

Any modification requires issuance of a new Root Framework version with explicit documentation, public notice, and on-chain reference.
