

AGI Root Canonical Snapshot (D1–D4)

D1 — Root Constitution (Locked)

Canonical Document: AGI_Root_One_Coin_Laws_v1.pdf
Status: Off-chain constitutional authority
Invariant: Non-economic, non-governance, non-operational
Reference: SHA-256 hash anchored via D2 token metadata

D2 — Polygon Anchor

Chain: Polygon Mainnet
Token Standard: ERC-721 (Supply = 1, tokenId = 1)
Purpose: Immutable on-chain anchor referencing D1 by SHA-256
Contract: Canonical deployed & verified instance (see Deployment Record)

D3 — Governance Layer (Delegated & Bounded)

Authority: Negative powers only (pause, quarantine, escalate)
Cannot amend D1 or D2
Replaceable module structure
Custody Model: Root Custody (EOA → Safe migration planned)
Emergency: Break-glass limited to constitutional protection only

D4 — Commercial Layer (Non-Sovereign)

Revenue Waterfall (applies to Net Platform Revenue only):
3% Registry Operations (.AGI TLD holder)
3% Governance Operations
3% UBI Systems
3% Infrastructure / Expansion
88% Builders / Developers

Affiliate payouts: Cost-of-acquisition, capped $\leq 15\%$ of Gross Service Revenue
Firewall: No commercial role grants authority, custody, or governance rights

Canonical Structural Rule

Authority flows downward (D1 → D2 → D3 → D4 constraints).
Revenue flows only within D4.

Root stands outside revenue.
